Following screenshot shows the desired output, detailed instructions are below:

- Download the list of *messages* and *appointments* from the following URL: http://www.iplato.net/test/ios-test.php
- Display network activity indicator during the download.
- Display the list of *messages* and *appointments* in *UITableView*.
- The messages should be sorted by sender name.
- The appointments should be sorted by a date.
- The *date* and the *time* of the appointment should be formatted according to user's system locale.
- When a user taps on the Remove button, the message should be removed from the list. The message cell should not be selectable.
- When a user taps on an appointment (cell), display an *Alert* with the name of the doctor.
- The header should not be visible when a list is empty.
